Experiment -4

AIM: To create MFA for IAM user.

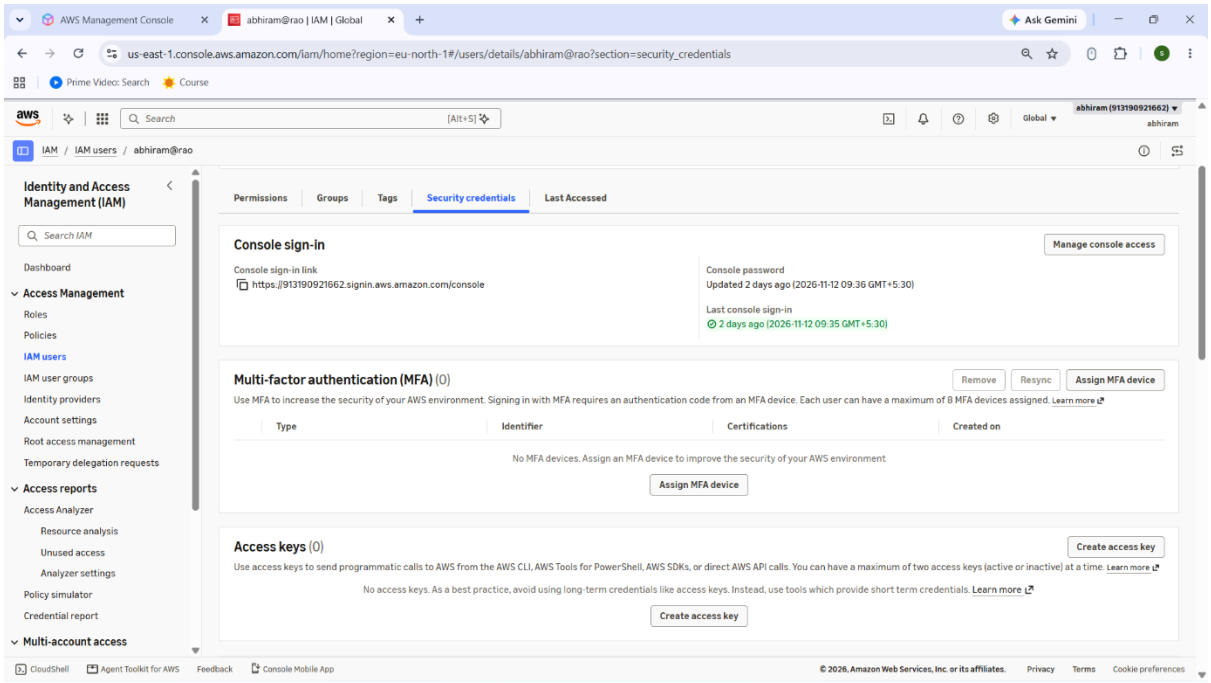

Description: Created an AWS Identity and Access Management (IAM) user to provide secure access to AWS resources. Configured user credentials, assigned appropriate permissions through policies and user groups, implemented security best practices such as password management and multi-factor authentication (MFA), and followed the principle of least privilege to ensure controlled and secure access to cloud services.

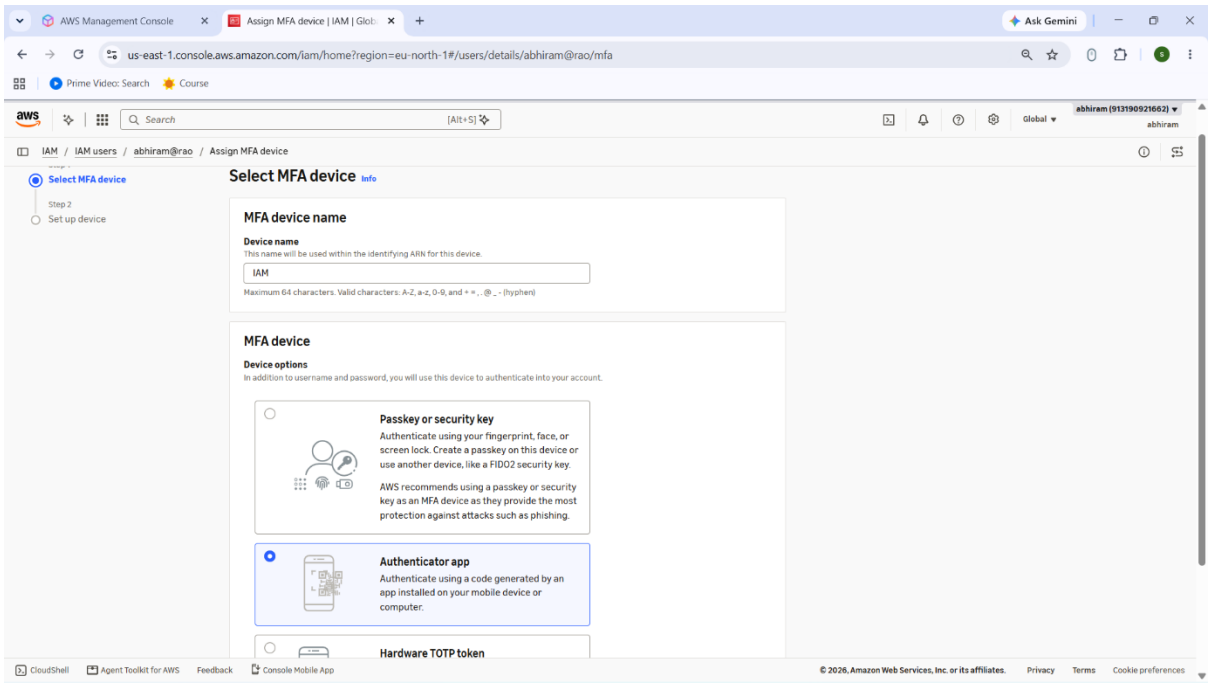

Steps:

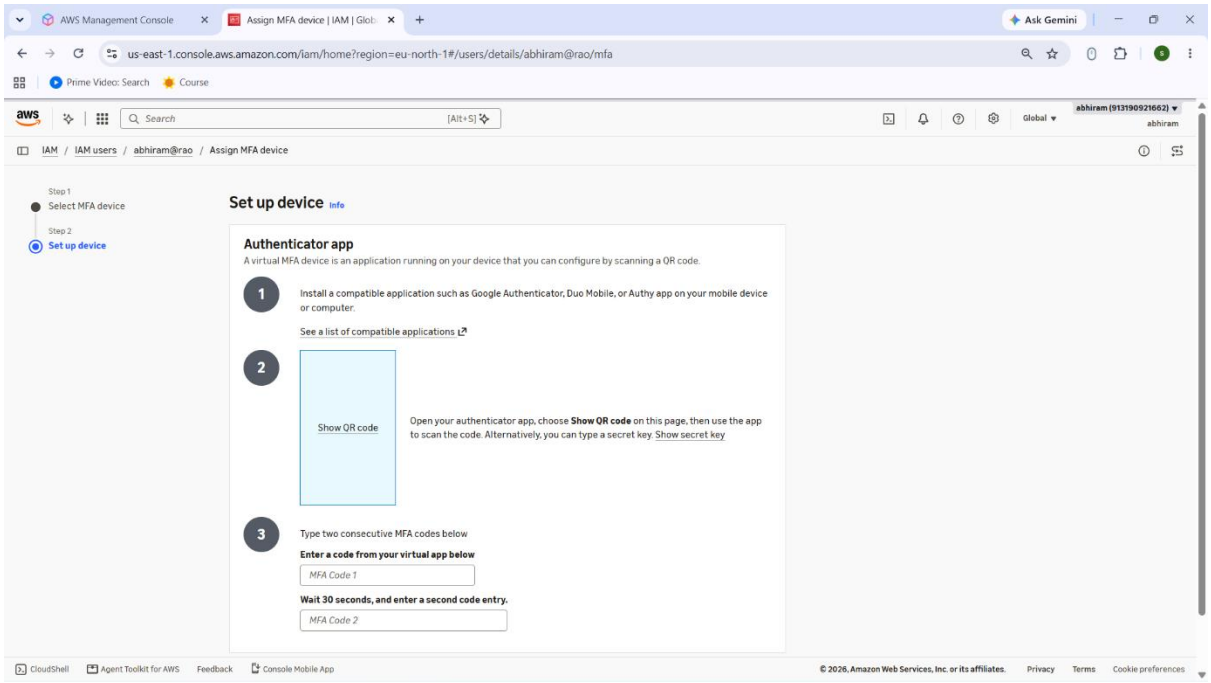

1. Open the IAM service in the console.
2. Click Users → select the user.
3. Open the Security credentials tab.
4. Under Multi-factor authentication (MFA), click Assign MFA device.
5. Give it a name, choose Authenticator app, and click Next.
6. Scan the QR code, enter two consecutive codes as above, and click Add MFA.

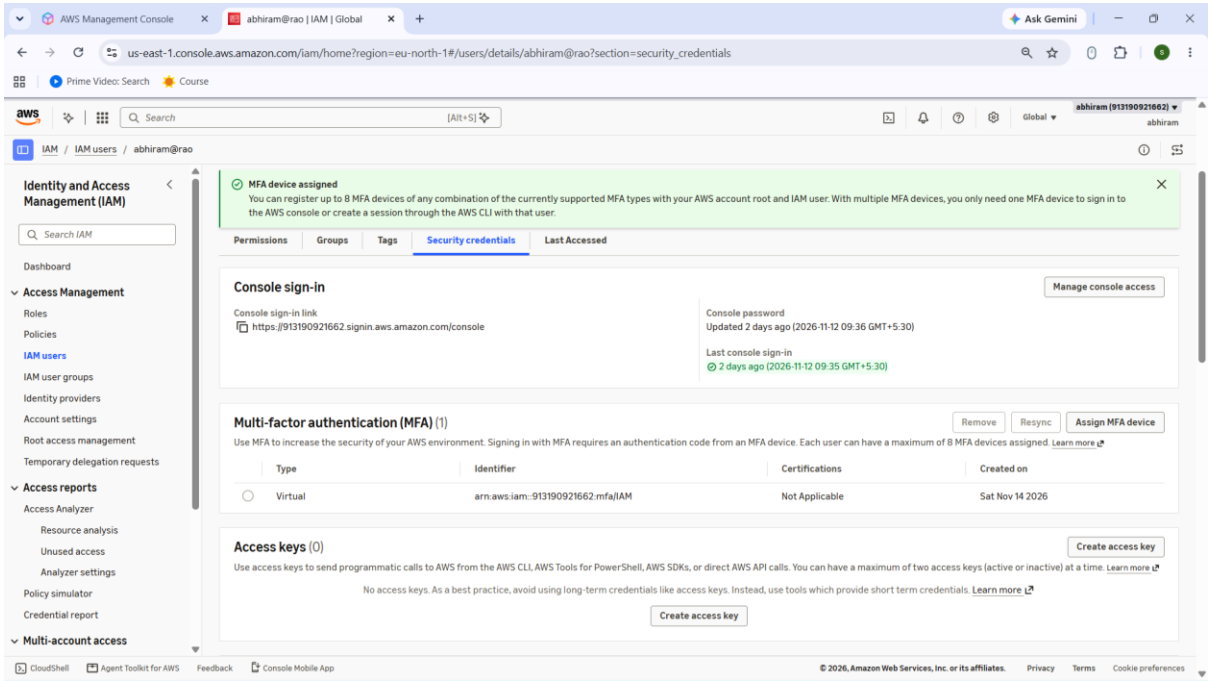

IAM users can also add their own MFA by signing in and going to their account name → Security credentials.

Output:

AWS Management Console
abhiram@rao | IAM | Global
us-east-1.console.aws.amazon.com/iam/home?region=eu-north-1#/users/details/abhiram@rao?section=security_credentials

Resync
Assign MFA device
Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 8 MFA devices assigned.

No MFA devices. Assign an MFA device to improve the security of your AWS environment
Assign MFA device
Access keys (0)
Create access key
Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API calls. You can have a maximum of two access keys (active or inactive) at a time.
No access keys. As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials.

Info
MFA device name
Device name
This name will be used within the identifying ARN for this device.
IAM
Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.
Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.
Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.
Hardware TOTP token

Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Show QR code
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code. Alternatively, you can type a secret key. Show secret key
3
Type two consecutive MFA codes below
Enter a code from your virtual app below
MFA Code 1
Wait 30 seconds, and enter a second code entry.
MFA Code 2

MFA device assigned
You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.
