Experiment -3

AIM: To create MFA for root user.

Description: an authenticator app on your phone, such as Google Authenticator, Microsoft Authenticator, Authy or Duo Mobile. Install one before you start.

Steps:

1. Sign in to the AWS Console as the root user (your account email and password).

2. Click your account name (top right) → Security credentials.

3. Find Multi-factor authentication (MFA) → click Assign MFA device.

4. Enter a Device name, for example root-phone.

5. Select Authenticator app → click Next.

6. Click Show QR code.

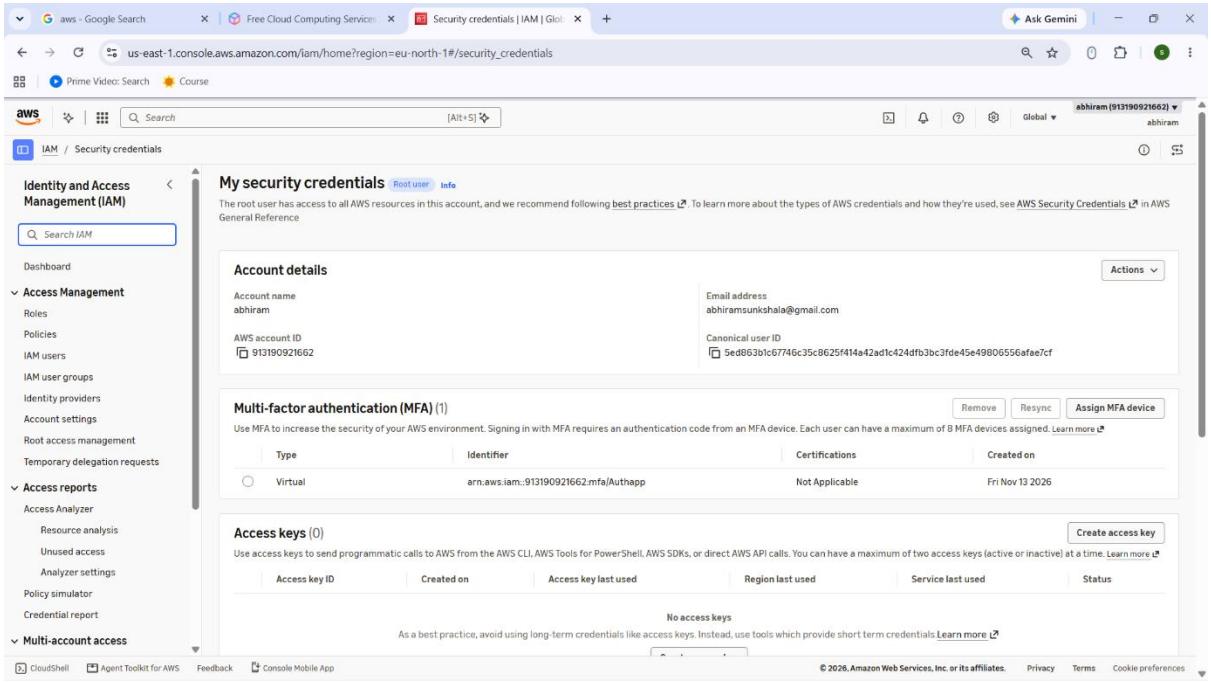

7. On your phone, open the authenticator app → Add account → Scan QR code → scan the code on the screen.

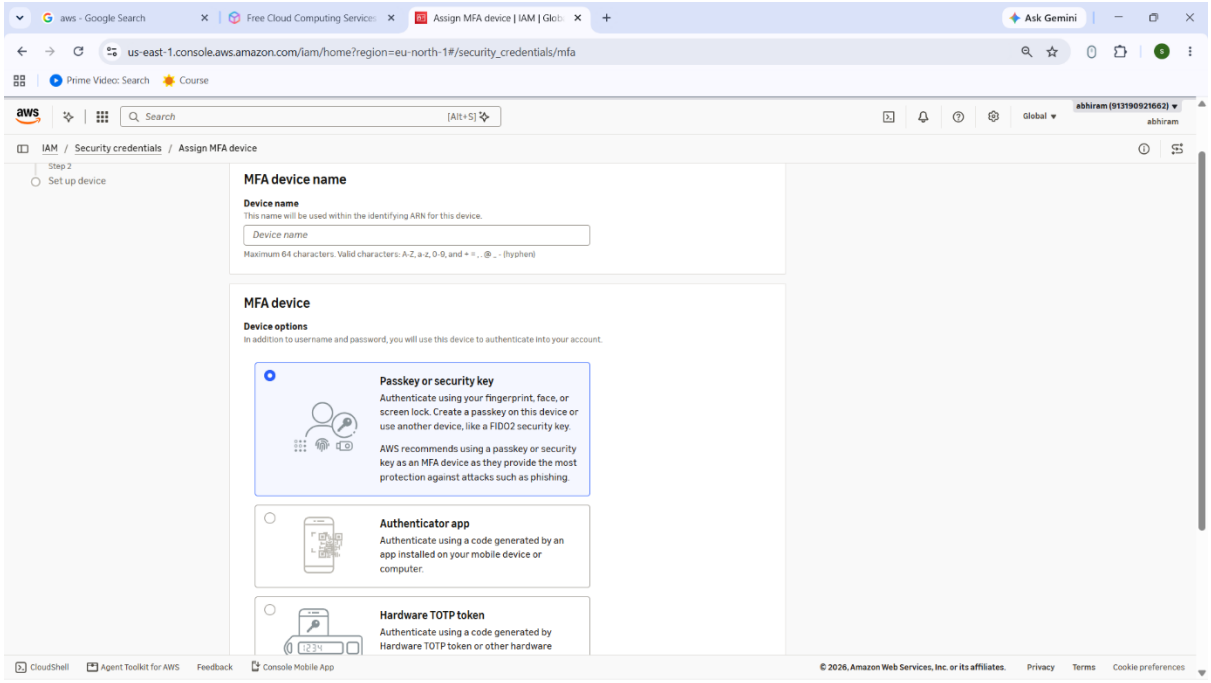

8. The app now shows a 6-digit code that changes every 30 seconds. In AWS, type MFA code 1 with the current code.

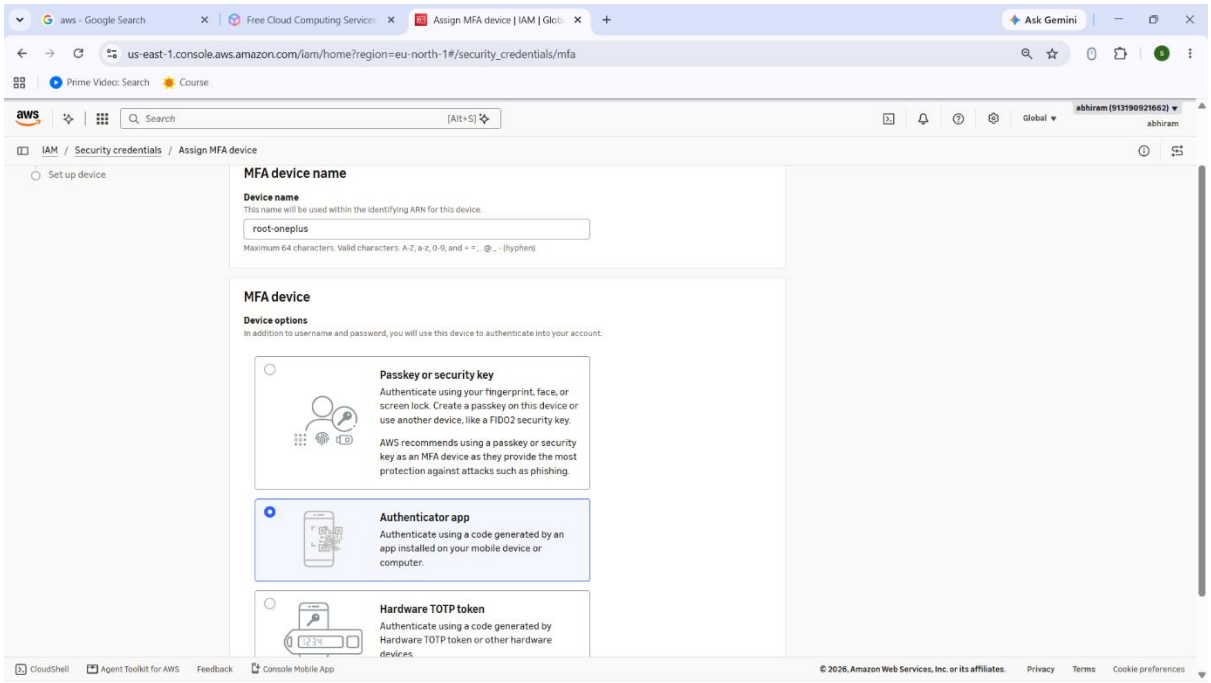

9. Wait for the code to change (about 30 seconds), then type the new code in MFA code 2.

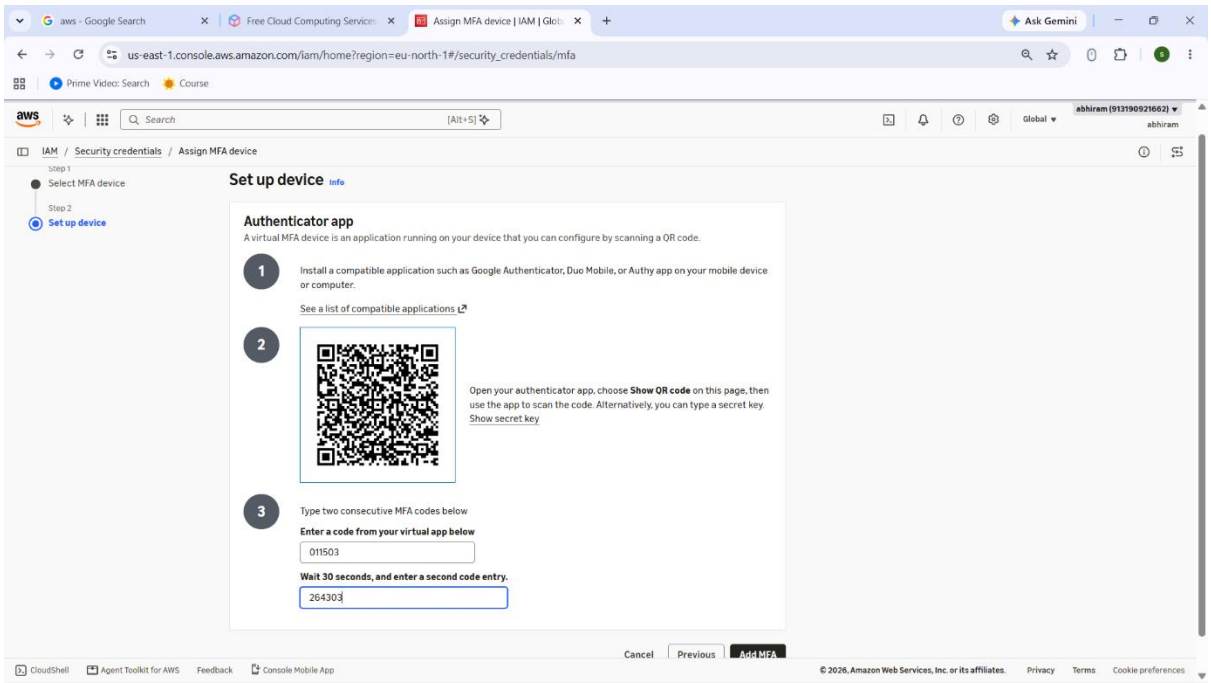

10. Click Add MFA.

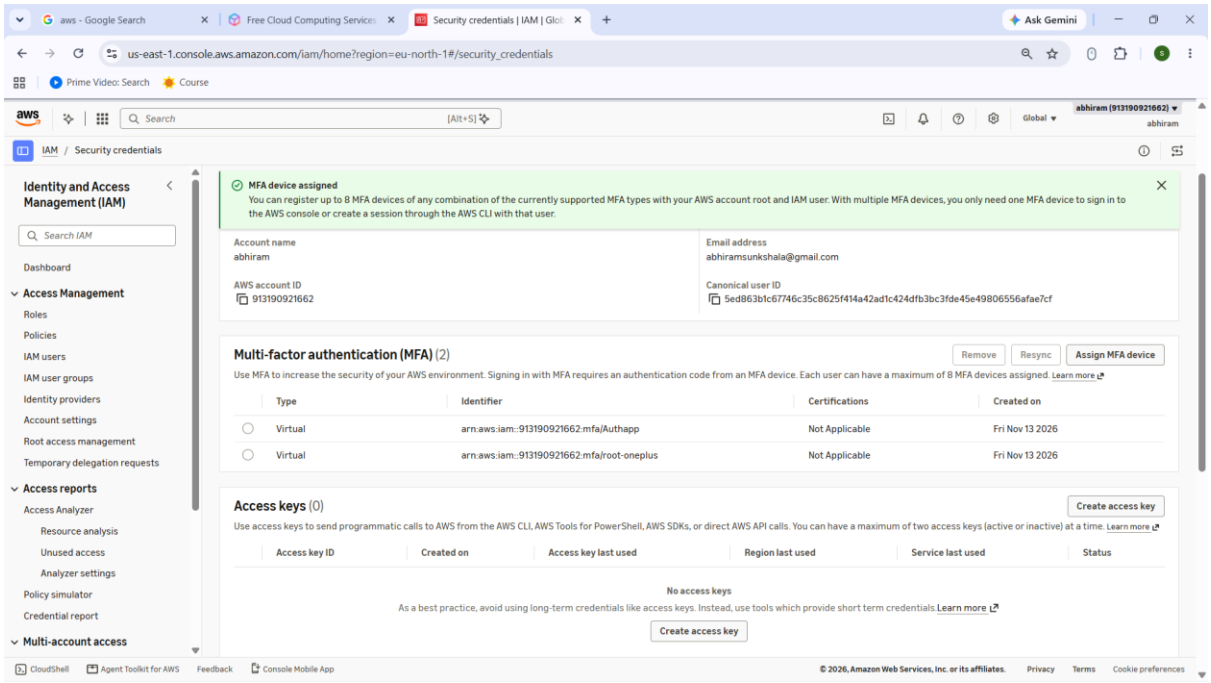

Output:

My security credentials
Account details
Multi-factor authentication (MFA) (1)
Access keys (0)
No access keys

MFA device name
MFA device
Passkey or security key
Authenticator app
Hardware TOTP token

MFA device name
Device name
This name will be used within the identifying ARN for this device.
root-oneplus
Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.
Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.
Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.
Hardware TOTP token
Authenticate using a code generated by Hardware TOTP token or other hardware devices

us-east-1.console.aws.amazon.com/iam/home?region=eu-north-1#/security_credentials/mfa

Step 1
Select MFA device
Step 2
Set up device
Set up device Info
Authenticator app
A virtual MFA device is an application running on your device that you can configure by scanning a QR code.
1
Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
See a list of compatible applications
2
Open your authenticator app, choose Show QR code on this page, then use the app to scan the code. Alternatively, you can type a secret key.
Show secret key
3
Type two consecutive MFA codes below
Enter a code from your virtual app below
011503
Wait 30 seconds, and enter a second code entry.
264303
Cancel

MFA device assigned
You can register up to 8 MFA devices of any combination of the currently supported MFA types with your AWS account root and IAM user. With multiple MFA devices, you only need one MFA device to sign in to the AWS console or create a session through the AWS CLI with that user.
